---

Good morning,

Thanks to all three of you for meeting last week on the Deschutes. Here's my recap of our next steps, plus the homework assignments that I had. As always, if I didn't get something right, please let me know asap.

First, I put everything in letter format now to save a step later. Note that the attached letter is very draft – I haven't thoroughly scrubbed it and it hasn't been reviewed by others at Ecology (and folks here will be interested). Send me any thoughts you have on the letter.

Second, for temperature, I think we landed on adding the Nooksack formula and the 17.5C. I would send a proposal, and Chris would take a look at it. My proposal, embedded in the very draft submittal letter, is attached. Do you think this approach for temperature will work for you? What are your thoughts?

Third, I said I'd send the current 303(d) listings covered by the TMDL. It's at the end of the letter. The 2015 Deschutes submittal occurred prior to EPA approving the current 303(d) list. So this list looks different because it is based on the current (2014) list. I think I got it right, but we'll need to do some confirming.

Fourth, Chris was going to continue the bacteria work. I added a placeholder in the letter.

Did I get that right? Anything else? Let me know what you think, and we can either set up a meeting or chat.

Andrew
